

Ladenko **ALPINE** Cavity Sliding Door System that can carry doors weighing up to 180kg

General	The ALPINE is a heavy duty architectural cavity sliding door system which has been designed to offer an architectural flush finish look to your sliding door. It has a discrete profile, with no hanger plates or fixing screws visible above the door and is suitable for all domestic, commercial and industrial building projects.
Builders	Many builders prefer to install the Ladenko cavity sliding door system because of its ease of installation which includes pre-cut and pre-drilled quality components, and smooth trouble free operation of the door system which ensures less 'on the job' installation time and better customer satisfaction.
Architects	Whether your project is casual or urbane, sophisticated or contemporary or even heritage, we can assure you that our attention to detail results in a high quality product with an assurance of reliability. The Ladenko cavity sliding door system is a fully approved, tested and recommended design, manufactured in Australia to certified design standards.
